

# HirtAdrian\_ProjectDescription

For my project, I will prepare data from the FAO (<https://www.fao.org/faostat/en/#data/QCL>) to be accessible in an interactive shiny web app. I plan to visualize trends in meat consumption by showing the numbers of animals slaughtered per capita/annum in different countries. The shiny app will enable the user to choose a species (pig, poultry, cattle) and see how annual slaughter numbers develop over time, relative to the number of citizens.
